Capital Improvement Project Updates

The San Dieguito Water District appreciates the residents who may have been temporarily impacted and inconvenienced due to these improvements. The projects have increased the reliability of the water system and enhanced fire flows in these areas. These projects underscore the District's commitment to maintaining and upgrading essential water infrastructure. [Work Across the City](#) and the [City's project dashboard](#) provide details related to projects within the City, including the District's projects.

Encinitas and Cardiff Water Looping Project

The new water pipeline construction project on Cambridge Avenue is now complete. The new pipeline extends from Dublin Drive north to Norfolk and then west on Norfolk Drive to approximately Oxford Avenue. Additionally, a new water pipeline has been constructed along Belleview Avenue, extending from M Street to Santa Fe Drive.

This project was completed on schedule and within the authorized budget, showcasing the District's commitment to timely and efficient infrastructure improvements. These enhancements will significantly improve the reliability of the water system and increase water for firefighting in the area, providing better service and safety for the community.

Caudor Street and Leucadia Village Court Pressure Regulating Valve (PRV) Project

This project has been completed on schedule and within budget. The project involved constructing a new PRV station near 1753 Caudor Street and enhancing the existing PRV station at 1503 Orpheus Avenue. The Orpheus improvements and the installation/connection of the new PRV station will regulate pressure for fire flow demands and improve water supply reliability.

San Dieguito Water District

San Dieguito Water District

has been serving coastal Encinitas since 1922. The District serves the communities of Leucadia, Old Encinitas, Cardiff, and portions of New Encinitas.

Use this [Find Your Water District](#) tool to confirm your water provider.

Air Release and Blow-Off Valve Replacement Project - Phase 1B

The District has completed replacing the air release valves and blow-off valves on the District's 36-inch transmission main. The existing valves reached the end of useful service life, and replacing them allows the District to better operate and maintain the critical 36-inch transmission main. Air release and blow-off valves help keep our drinking water clean and flowing. They let unwanted air out of the pipes and flush out water when needed to keep the system fresh. This project was completed on schedule and within the authorized budget.

2024-2025 Water Year Wrap-Up

The 2024-2025 water year, ending on September 30th, saw below-average rainfall in the San Diego area. Despite this, the San Dieguito Water District's supply outlook remains strong for the 2025-2026 water year, thanks to effective regional water management, local reservoirs, imported supplies, and water use efficiencies. These efforts ensure we can meet customer demand in the coming year.

The District encourages continued water-saving efforts. Reducing outdoor water use and using drought-tolerant landscaping will help maintain long-term water reliability and protect against potential future shortages. Your conservation efforts are vital for a sustainable water future for our community.

Recycled Water Rates

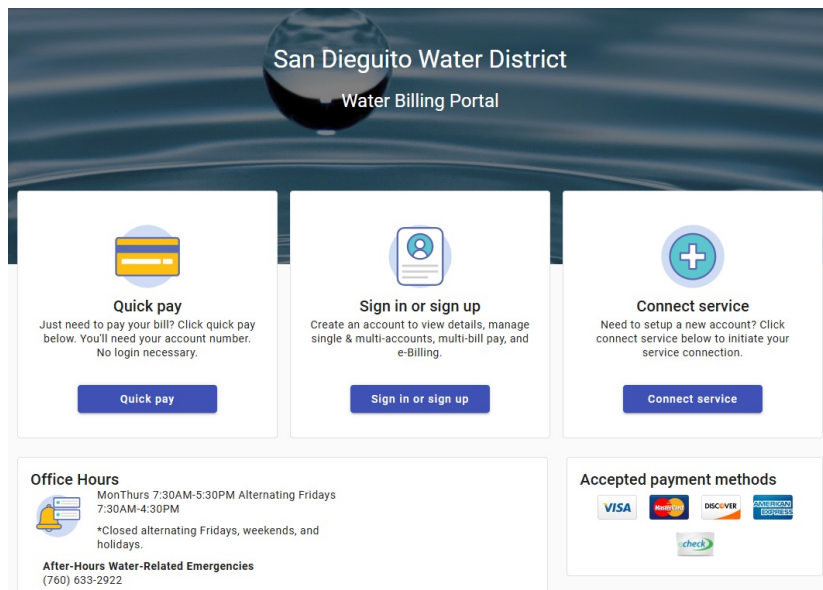

The San Elijo Joint Powers Authority (SEJPA) Board has approved rate increases for recycled water that the District purchases for sale to its recycled water customers. The District serves about 100 recycled accounts for irrigation, conserving potable water for potable needs. This rate change will be factored into the next cost of service study update with no

immediate impact on customers. SEJPA will review and possibly adjust down the annual rate increase based on financial performance. Recycled water is still around fifteen percent cheaper than potable water and is a drought proof local water supply. More information can be found in the SEJPA Board agenda, located [here](#).

Utility Access Portal - Coming in November!

We are updating our Customer Self Service to the Utility Access Portal. With the update, customers can:

- quick pay as a guest without creating an online account;
- pay bills from any device any time;
- view real-time account balances;
- view prior consumption data for comparison purposes;
- access payment histories, bill due dates, and deposits on file;
- request service or change account information; and
- update auto pay at any time.

Keeping You Informed about Water Quality

The District has successfully completed its routine lead and copper testing, with results submitted to and accepted by the State Water Resources Control Board, Division of Drinking Water. This testing confirmed that the water supplied by the district meets all required federal and state thresholds for lead and copper, demonstrating our continued compliance. A summary of these results, along with all other water quality data, will be included in the district's annual Water Quality Report (Consumer Confidence Report), which is released each summer and sent to all customers. We remain dedicated to providing safe, reliable, and high-quality drinking water.

District Staff Participate in Open House and Emergency Preparedness Event

On September 6th, SDWD staff hosted a booth at the Olivenhain Municipal Water District Open House and Emergency Preparedness Event. With over 200 attendees, the event was a success. SDWD staff engaged with our customers and the

community, answering questions and sharing insights. Thanks to everyone who visited our booth. Stay tuned to our newsletter for upcoming events.

Urban Water Management Plan (UWMP)

Staff began the update to the District's UWMP. This is required every five years and serves as the long-term planning document that will help to ensure the District can provide its customers with reliable water supplies. A draft version of the UWMP will be available for the public to review in spring 2026.
